

RuleSet					
RuleTable PNR Scoring (PNR Individual)					
NAME	PNR Type	PNR condition	Default value (Dynamic)	Force Kickout	Comment
SSR	PNR.INDIVIDUAL	PNR.SSR = SSR	Score = 200	Yes	All the SSRs to be defined individually Ex:INFT - Infant WCHR - Wheelchair, can walk WCHS - Wheelchair, can't climb stairs WCHC - Complete immobile LANG – Language restrictions CHLD - Child MAAS - Meet and assist - many reasons UNMR - Unaccompanied minor BLND - Blind DEAF - Deaf EXST - Large person taking up two seats MEAL - Meal request NSST - seat information NRPS
Cabin	PNR.INDIVIDUAL	PNR.Cabin = F	Score = 1500 - 2000	Yes	Example : 1700 assuming cabin seat price of J > F> Y
Cabin	PNR.INDIVIDUAL	PNR.Cabin = J	Score = 1500 - 2000	Yes	Example : 2000 assuming cabin seat price of J > F> Y
Cabin	PNR.INDIVIDUAL	PNR.Cabin = Y	Score = 1500 - 2000	Yes	Example : 1500 assuming cabin seat price of J > F> Y
Class	PNR.INDIVIDUAL	PNR.class = A	Score = 500-1000	Yes	
Class	PNR.INDIVIDUAL	PNR.class = C	Score = 500-1000	Yes	
Class	PNR.INDIVIDUAL	PNR.class = K	Score = 500-1000	Yes	
Connection	PNR.INDIVIDUAL	No of downline connection = Integer	Score = 100 * Int	yes	Score to be multiplied with number of downlines. Example : If the impacted flight in the PNR has 2 downline connection, the score will be =2 *200 = 400
Paid Service	PNR.INDIVIDUAL	PNR.Paid services= Yes	Score = 200	No	List out different paid services which might impact while solutioning.
Booking-Type	PNR.INDIVIDUAL	PNR.booked_as = Group	Score = 500	No	Ex: Corp,Group,Military
No of PAX	PNR.INDIVIDUAL	PNR.No Of PAX = Int()	Score = 50 * Int	No	Score to be multiplied with no of Pax. Example : If the PNR has 4 passengers, the score will be 4*50=200

Loyalty	PNR.INDIVIDUAL	PNR.Loyalty = Loyalties	Score = 1500 - 2000	No	Loyalty Ex: CM Presidential platinum - 2000, platinum-1800, gold-1600 and silver -1500
---------	----------------	-------------------------	---------------------	----	---

RuleSet				
RuleTable Flight Scoring				
NAME		Flight type	Sample scoring	
Arrival Delay	Flight.proposed	Arrival Delay <= 6 hours	70	
Arrival Delay	Flight.proposed	Arrival.Delay <= 12 hours	50	
Arrival Delay	Flight.proposed	Arrival.Delay <= 24 hours	40	
Arrival Delay	Flight.proposed	Arrival Delay <= 48 hours	30	
Equipment	Flight.proposed	Equipment No = Original Equipment No	50	
City Pairs	Flight.proposed	Citypairs = Same	40	
City Pairs	Flight.proposed	Citypairs = Different but same city	30	
City Pairs	Flight.proposed	Citypairs = Different	20	
STD of proposed flight	Flight.proposed	SPF <= 6 hours of original	70	
STD of proposed flight	Flight.proposed	SPF <= 12 hours of original	50	
STD of proposed flight	Flight.proposed	SPF <=24 hours of original	40	
STD of proposed flight	Flight.proposed	SPF <= 48 hours of original	30	
Stop over	Flight.proposed	IsStopover = Yes	-20	
Quality Score Grading based on above rules - Rule to eliminate the lower grade alternate flights from so				
Flight Value	Quality Score Grade			
Flight.Set() >= 200	A			
Flight.Set() >= 180	B			
Flight.set() >= 150	C			
Flight.set() <150	D			

RuleSet				
Rules for Alternate Flight Selection and Connections				
NAME	Reason	CONDITION	ACTION	Comment
Propose Flight	Flight.Propose	ETD > 72 hours from impacted flight	Don't select this flight for alternate solution.	
Downline connection	Downline consider	Connection time (Time difference between the arrival time of current itinerary and departure time connecting downline flight) between the flight and connection flight > 12 hours	Don't consider as the connection flight.	
Downline connection	Downline.consider	Connection time < Minimum connection time (Go with hardcoded value of 1hr)	Don't consider as the connection flight.	Minimum Connect Time connection rule (Passenger having connecting flight)
		Apply Grouping Rules while calculating available inventory for the alternate flight		

Class Mapping		
Original Class to Class Mapping		
Original Class	Proposed Class	Comment
A	F,S	This will be Used when Original class is not available to rebook
S	F,A	
F	S,A	
J	O,C,I	
C	O,J,I	
I	J,C,O	
O	J,C,I	
Y	B,P,Z,	
B	Y,P,Z	
Downgrade Class mapping		
Downgrade Cabin	Downgrade Class	Comment
J	Y	1. This is only applicable if Downgrade is on. 2. If Downgrade to Cabin J/F then refer to Downgrade class respectively
F	Y	
Upgrade Class Mapping		
Upgrade Cabin	Upgrade Class	Comment
Y	F	1. This is only applicable if Upgrade is enabled. 2. If Upgraded to Cabin F/J then refer to Upgrade class respectively
F	J	

Class Mapping - Mock up data.		
Cabin	Class	Comment
J	A, D, J	This reference table can be used for identifying the cabin for each class of service
F	F, B	
Y	S, V, W , Z, O, S, T, U	

Solution Ranking

Factors considered for solution ranking	Notes on score value	
Number of PNR-Passengers ended up without any alternate flight solution	More score for a solution file with less impacted passengers without seats	
% of PNRs considered for default flight solution and % of PNRs are considered for exception solution	More score for a solution file where the % of PNRs under default solution is higher	
Based on the mean arrival time delays between original impacted flight and alternate flight solution	More score for less mean arrival time delay	More comments : 1-1 : Single impacted flight in PNR along with other non-impacted flights and alternate solution flight is single flight corresponding to impacted flight and non-impacted flights in PNR will be retained. 1-Multi : Single impacted flight in PNR along with other non-impacted flights and alternate solution is combination is more than 1 new flights and non-impacted flights in PNR will be retained. Multi -1 : Single impacted flight in PNR along with its downline flight is replaced (journey plan has more than one flight) with a single alternate solution flight to cover the entire journey. Multi -Multi : Single impacted flight in PNR along with its downline flight is replaced (journey plan has more than one flight) with a combination of alternate flights
	Based on the number of combination of solutions (4 combinations) score solution file. Example : Solution file 1 has more % of 1-1 and Multi-1 solution compare to other solution file2 which has more % of 1-Multi solution. In this case, the solution file 1 should be given more score value	
Journey based solution scoring mechanism : 1-Multi, 1-1, Multi-1, Multi-Multi solution combination
